Hydraulic accumulator cut-off and protection unit type B20

WK 491 810

NS20

up to 36 MPa

07.2016

DATA SHEET - OPERATION MANUAL

APPLICATION

Hydraulic accumulator protection and cut-off unit is used for connecting hydraulic accumulator to the system while meeting safety requirements.

The unit is complied with the regulations of directive 2006/95/WE for the following voltages:

- •50 250 V for AC
- •50 250 V for DC

DESIGN DESCRIPTION

The unit consists of a housing incorporating the following sub-units:

- ball cut-off valve for connecting and disconnecting the accumulator with the hydraulic system
- manual relief valve for safe unloading of accumulator after cut-off
- safety valve for system protection the valve can can be with CE approval or without

If a unit with CE approval valve is ordered, it is set to required pressure and sealed

- solenoid directional valve for electric control of accumulator unloading (in directional valve version)
- threaded flange for connecting the unit to the accumulator (standard flanges enable connecting an EPE accumulator)

TECHNICAL DATA

Hydraulic fluid	mineral oil	
Required fluid cleanliness class	ISO 4406 class 20/18/15	
Nominal fluid viscosity	37 mm ² /s at temperature 55 °C	
Viscosity range	$2.8 \text{ up to } 380 \text{ mm}^{2}/\text{s}$	
Fluid temperature range (in a tank)	recommended	40°C up to 55°C
	max	-20°C up to +70°C
Ambient temperature range (version)	without solenoid	-20°C up to +70°C
	with solenoid	-20°C up to +50°C
Maximum operating pressure	36 MPa	
Nominal flow (at $v = 6 \text{ m/s}$)	150 dm ³ /min	
Housing material	steel	
Pressure relief valve type	DBDS10K acc. to data sheet WK 450 610	
Solenoid directional valve type	2URED6C1-12/2M1NZ4 acc. to data sheet WK 493 130	
Directional control valve supply voltages	12V DC; 24V DC or 230V 50Hz	
Nominal solenoid power	26 W	
Weight	6,4 - 6,9 kg	

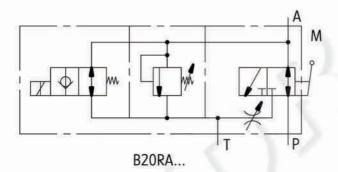

INSTALLATION AND OPERATION REQUIREMENTS

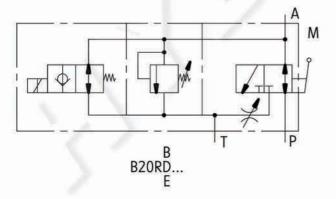

- Only fully functional and operational unit, properly connected to electrical installation must be used.
 Connecting or disconnecting the valve to an electrical installation must only be carried out by qualified personnel.
- Solenoid plug shall precisely adhere to socket and shall be secured with thread bolt screwed in securely in a place. It is forbidden to operate the valve if the tightness and suitable clamp of cable in the plug gland are not ensured.
- During the period of operation must be kept fluid viscosity acc. to requirements defined in this Data Sheet - Operation Manual

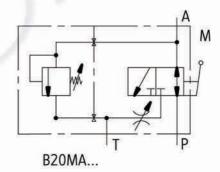

- In order to ensure failure free and safe operation the following must be checked:
 - · condition of the electrical connection
 - · proper working of the valve
 - · cleanliness of the hydraulic fluid
- Due to heating of unit block and solenoid coils to high temp., the unit shall be placed in such way to eliminate the risk of accidental contact with untit during operation or to apply suitable covers acc. to PN - EN ISO 13732 - 1 and PN - EN 4413
- In order to ensure tightness of unit block, one should take care of dimension of sealing rings, tightening torques and valve operation parameters given in this Data Sheet - Operation Manual
- A person that operates the unit must be thoroughly familiar with this Data Sheet - Operation Manual.
